Luxembourg | Work permit: Luxembourgish | Born 1992 (34)

SUMMARY

Technical lead and senior Java engineer with 10+ years of experience designing and evolving enterprise systems in banking, insurance, and institutional environments. Leads backend teams as codebase owner and reviewer, setting the bar for code quality, performance, and security. Specialized in modernizing legacy platforms into scalable Quarkus and Spring microservices, and in running them reliably from development to production on Kubernetes and OpenShift. Hands-on profile combining development, production investigation, and technical decision-making across multi-team contexts.

EXPERIENCE

Technical Lead

06/2026 - Present

LALUX | Luxembourg | External

Project: EasyApp (main mobile, web and backend application) & DKV

- Lead a Quarkus backend team of two senior developers
- Decommission the DKV services
- Work on reimbursements, claims, insurance policies, mobile payments, documents and document management systems (DMS)
- Own and maintain the codebase: code reviews, coding standards and technical decisions
- Drive performance and security across the services
- Configure Quarkus integrations with Keycloak, Oracle Database, Kafka Streams and Grafana
- Implement XML processing with XSD validation and SOAP web services
- Lead production investigations and root-cause analysis
- Manage dev, test and production environments on OpenShift
- Set up and maintain CI/CD pipelines with GitHub Actions

Technical Expert

09/2025 - 06/2026

Societe Generale | Esch-sur-Alzette, Luxembourg | External

Project: Main Banking Payments Platform

- Migrated artifact repository from Nexus to JFrog Artifactory + Xray
- Refactored blocking services into reactive endpoints
- Investigated production performance issues using logs and monitoring
- Adapted CI/CD pipelines to new delivery architecture
- Evaluated Spring vs Quarkus native image proof of concept
- Contributed to evolution of legacy payment workflows into SOA

Senior Software Engineer

02/2025 - 08/2025

European Union Justice Court | Luxembourg | External

Project: Distributed Search Platform

- Built document processing engine extracting structured content from Word files (Apache POI)
- Implemented multilingual content pipeline with Angular frontend and Azure DevOps
- Developed resilient Spring Boot APIs serving documents from cloud storage
- Implemented Elasticsearch indexing for full-text and faceted search
- Integrated workflows across distributed microservices environment

Senior Software Engineer

02/2024 - 12/2024

European Parliament | Kirchberg, Luxembourg | External

Project: EP-VOTE

- Integrated applications into unified microfrontend architecture
- Developed reactive services using CQRS, SAGA and Event Sourcing
- Implemented CI/CD automation pipelines

- Mentored developers on clean code and testing
- Worked on containerized environments (Docker, Kubernetes, Nginx, Rundeck)

Team Lead / Software Engineer
01/2019 - 01/2024

VERMEG | Tunis, Tunisia | Permanent

Project: SOLIFE - Core Insurance & Asset Management Platform

Team Lead 01/2023 - 01/2024

- Led team of 5 developers delivering features for life insurance platform
- Coordinated estimations and technical discussions with stakeholders
- Technical analysis and ticket dispatching
- Managed complex production issues and high-priority corrections
- Organized knowledge sharing sessions

Software Engineer 01/2019 - 01/2023

- Developed REST services and database logic in high-volume financial environment
- Investigated root-cause production issues
- Implemented release packaging and deployment processes
- Contributed to multi-client deployments (Luxembourg, France, Belgium, Italy)

Software Engineer
09/2017 - 12/2018

Dewinter Group | Tunis, Tunisia | Permanent

- Implemented online payment processing including fee and tax calculations
- Developed backend administrative dashboard
- Improved performance and usability of web applications

Software Engineer Junior / Intern
06/2016 - 09/2017

Genioworx | Tunis, Tunisia | Permanent

- Developed Java backend services and ORM mappings
- Integrated Angular dashboards with backend data
- Participated in testing, deployment, and user training

SKILLS

Languages & Frameworks: Java 8-17, Java EE, Spring Core, Spring Boot, Spring MVC, Spring Security, Spring Data, Spring AOP, Quarkus, Kafka Streams, Keycloak, JavaScript, jQuery, NodeJS, ExpressJS, RESTful API, SOAP, HTML5, CSS, JSON, XML, WSDL, XSD, XPDL

Databases: Oracle, PostgreSQL, Redis, ElasticSearch

Architectures: Microservices, Microfrontends, MVC, Semi-monolithic, Monolithic

Design Patterns: Chassis Design, CQRS, SAGA, Event Sourcing

DevOps: Docker, Kubernetes, OpenShift, GitHub Actions, Jenkins, Grafana, Rundeck, XLDeploy, XL Release

Dev Practices: BDD, TDD, Agile, Scrum, Functional Reactive Programming

Repository & Build: Maven, NPM, Yarn, Composer, Nexus, JFrog Artifactory

Versioning: Git, SVN

Tools: IntelliJ IDEA, DataGrip, Oracle SQL Developer, PL/SQL, JBoss 6 & 7, Postman, SoapUI, MinIO, Jira, Confluence, Azure DevOps, Apache POI

EDUCATION

Computer Science Engineer
09/2018 - 07/2022

ESPRIT | Tunis, Tunisia

Higher Technical Diploma (Computer Science)
09/2012 - 06/2016

ISET Kelibia | Tunisia

CERTIFICATIONS

Certified Professional Scrum Master | scrum.org | verify on Credly

Oracle Certified Professional: Java SE 11 Developer | Oracle | verify on Credly

PROJECTS

My Lab Personal | Since 2024

Enterprise-grade personal lab run with AI agents: identity management with FreeIPA and integrated DNS, a Kubernetes (k3s) cluster behind Traefik, Jenkins CI/CD and a mail server, designed, built and operated end to end.

JQCD - Jira Query Centralized Database Vermeg | 2023

Tool to extract and centralize all Jira queries delivered to Vermeg clients from 2008 to the present, enabling cross-project analysis and reporting.

Virtual Links Vermeg | 2023

Batch system creating a relationship graph across approximately 2,300 non-relational database entities, enabling navigation and impact analysis of otherwise disconnected records.

DevOps System Dewinter | 2018

Automated CI/CD pipeline replacing manual FTP-based deployments by integrating Jenkins and Git, significantly reducing deployment time and human error.
